

The extreme danger of bias in Artificial Intelligence

By John Tubert, Executive Technology Director

ARTIFICIAL
INTELLIGENCE

John Tubert
Executive Technology Director

Transformation at Speed

00:04

R/GA has reinvented their business five times to capitalize on the disruption of technology /

1977 -
1985

Pioneered computer-assisted filmmaking

1986 -
1994

Pioneered an integrated digital studio

1995 -
2003

Pioneered a new model for an interactive agency

2004 -
2012

Pioneered a new agency model

2013 -
Present

For the connected age

00:04

Unconscious bias

Affected people: ~10

Affected people: ~500m

Put yourself in these
4 scenarios...

Imagine....

**Amazon hiring tool
discriminated against
women**

00:04

Imagine....

**Amazon hiring tool
discriminated against
women**

00:04

Imagine....

**You are looking for a
home**

Imagine....

**You are looking for a
home**

Imagine....

**Imagine a self driving
car doesn't see you as a
human because the
color of your skin**

00:04

Imagine....

**Imagine a self driving
car doesn't see you as a
human because the
color of your skin**

00:04

Imagine....

**You are flagged
as twice as likely to
commit a crime because
you are a minority**

Imagine....

**You are flagged
as twice as likely to
commit a crime because
you are a minority**

A circular progress indicator with an orange-to-black gradient, showing approximately 25% completion. Below the circle is a small white dot.

Things companies can do to fix these issues

Hiring more diverse teams

Things companies can do to fix these issues

- Use existing data sets like the ibm one that has 1-million images of human faces
- Making the training data public
- Ford cars are using 50% more female voice than male to train GPS

Things companies can do to fix these issues

- Adding bias testing to the product's development cycle
- <http://www.oneilrisk.com/> online risk consulting and algorithms auditing

Things companies can do to fix these issues

- If you train using historical data you will make the same mistake, need to identify the bias on the data
- IBM also is creating a tool called “The Fairness 360 Kit” to detect bias in algorithms. Microsoft and Facebook are also building one.

Thanks
